

Explosion-Proof Lifts from TriStar Aircraft Spares!

The competition still uses hydraulic joysticks requiring many hoses to route through cable tracks to the platform. Hydraulic joysticks have been replaced by electric over 20 years ago due to the maintenance and leakage nightmare. The competition has 27 hoses and 38 fittings at the platform.

A high pressure hydraulic leak or blown hose could ruin a paint job!

EX ARTICULATING BOOM LIFTS

- 36' to 86'
- 350 lbs to 500 lbs. platform capacity
- Available in articulating, telescoping and vertical booms
